

Position: Business Intelligence Developer

Job Description: Develop, design and support Business Intelligence reports, universes, platforms and applications. Work with various business units to understand and fulfill their business intelligence/reporting information needs. Execute, migrate and automate existing reports to support day-to-day requests. Review and update reports to conform to the Business Analytics & Reporting Team development standards. Work hands-on and in depth with the Business Objects Designer product in order to design universes from the ground up against both dimensional and relational schemas. Create complex reports in Business Objects Desktop Intelligence, Web Intelligence and Crystal Reports. Responsible for training end-users and supporting Business Intelligence Center of Excellence initiatives. When necessary, resolve technical problems, as well as investigate and troubleshoot data inconsistencies and data integrity issues.

Required Education & Skills: Bachelor's Degree or higher in Computer Science, Computer Engineering, Electrical Engineering or a closely related field. Strong working knowledge of the following technologies: Business Objects 6.x and XI, Crystal Report and Crystal Enterprise, Oracle and SQL Server, Transact SQL, VBA Macro for Business Objects and Microsoft Excel.

Required Experience: 2 years experience as a Business Objects Developer/Designer using Universe Design Development & other Business Objects tools.

Job Location: Atlanta, GA
